Training Services

For RF-SMART customers and partners we offer three convenient ways to obtain professional RF-SMART Training. Our training programs impart the functional knowledge of RF-SMART needed to make the most out of your ownership and partnership experience.

Training in our Jacksonville Lab

In our state-of-the art Lab in Jacksonville Florida, students receive a wealth of instructor-led and hands-on RF-SMART training without the distractions of everyday work. The course lasts two days and costs \$600 per day per person. Discounts apply for teams of three or more.

Training at your facility

Receive the same instructor-led and hands-on training as in our Jacksonville Lab in the convenience of your facility. This option is best suited for those that require three or more users to be trained. Training is billed hourly (four hour minimum) and trainer travel expenses apply.

Training On Demand

We offer four hour (minimum) blocks of training online or via telephone. Each four hour block can be spread out over days and there is no limit to the number of attendees. Fees are billed at your negotiated RF-SMART hourly services rate and your training hours never expire.

RF-SMART Standard Training Course

Introduction includes barcoding basics, a mobile hardware overview, an introduction to RF-SMART Support Services and our solution architecture.

The SmartConsole portion introduces students to our web-based back office and thoroughly trains them on administrative functions, mobile device management, configuring workflows, working with business and transaction data, and label printing. Includes hands-on activities.

Workflow training provides your team with an in-depth understanding of RF-SMART's ERP-specific functionality for Dynamics AX or JD Edwards. Includes hands-on activities.

Server & Software Maintenance reviews recommendations for the server needed to ensure optimal RF-SMART performance over the long run.

Warehouse Intelligence training, available to customers who purchase this module, imparts knowledge of how WI works, our standard reports, and how to create custom reports and views.
